

Synel for Sports Clubs

Easily manage member's entry and activities

Sports club activity is characterized mainly by the need to manage club's employees and members, members' authorizations and attendance / participation in the different classes. Synel's solution includes control over member's identification by means of a proximity or magnetic badge, fingerprint or smart card. Control is automatic, and is performed without manual intervention.

The use of smart card and writing information of member's authorization on it simplifies control and follow up on entries to the club and on member's activities in the club.

Authorization is given either to individuals or to groups of people or families.

The system is based on SY-400 controllers, various readers, Falcon or Falcon PRO software and barriers such as doors, turnstiles and more.

Installing the FP reader on a turnstile enables full control over entries, while eliminating the need for the presence of a security guard.

Synel's complete time and attendance and access control solutions cater precisely for these needs, easily and efficiently.

Benefits

- **Optimized system**
- **Maximum convenience for all members**
- **High cost-effectiveness**
